

115 年奇美醫院胸腔內科臨床病例討論會

- 1 時間：115年 05月 05日 PM: 4:00-5:00
- 2 課程活動題目：Sjogren' s syndrome in CXR
- 3 主講人：柯獻欽
- 4 地點：奇美醫學中心 10 樓空橋討論室
- 5 聯絡人：黎安騏 (06-2812811 #57132)
- 6 摘要：

Sjogren's syndrome is a chronic immunemediated inflammatory disorder characterized by lymphocytic infiltration of the lacrimal and salivary glands associated with the clinical features of **keratoconjunctivitis sicca** (xerophthalmia - dryness of eyes) and **xerostomia** (dryness of mouth). SS exists in both a primary and secondary form (associated with other collagen disease).

Sicca Syndrome - dry mouth & dry eyes.

Prevalence: 2 -5% of people aged 60 and above have primary SS.

Pulmonary features include Chronic bronchitis secondary to dryness of the tracheobronchial tree, lymphocytic pneumonitis, interstitial pulmonary fibrosis, and pseudolymphoma nodules; pleurisy and pulmonary vasculitis are rare.

Pleuritis

Interstitial fibrosis

Lymphocytic interstitial pneumonitis

Pulmonary vasculitis and hypertension

Desiccation of tracheobronchial tree

Pulmonary lymphoma and pseudolymphoma
